TO: Dr. Lance Garrison,
Protected Resources Branch

FROM: Dennis Lee,
SEFSC Observer Coordinator

SUBJECT: Longline gear Incidental Take summary for quarter 2, 2005.

The Miami Laboratory Pelagic Observer Program (POP) is providing you with a summary report of the incidental take of marine mammals, turtles, and birds that have been recorded by observers aboard longline vessels for April 1 to June 30, 2005. The POP was involved in the regular coverage (8% target) of the fleet ,in addition to providing observers for a Cooperative Research Program (CRP) for bycatch reduction project . Combining effort in sets from both observer events, the POP attained a coverage rate of 9.7%.

Regular (8% target) Coverage Summary:

The POP completed during quarter 2 a coverage rate of 5.4% during the regular selection (8%) of the pelagic longline fleet for the quarter (Table 1). Observers recorded two (2) marine mammals (1-Pilot Whale(sp)-alive, 1-Shortfin pilot whale-alive) and no (0) sea birds five , in addition to (5) sea turtles (4 leatherback-alive; 1 loggerhead-alive).

CRP coverage summary:

During quarter 2, the POP was also responsible for providing observers for a special Cooperative Research Program (CRP) on bycatch reduction research involving six (6) U.S. pelagic longline vessels participating in an experimental designed project. In general, these six vessels were utilizing their regular gear and following their typical fishing operations within their geographical fishing areas. The experimental design was comparing different hook baiting techniques (bait threaded vs. single hooked) in an alternating pattern and crews were also attaching scientific equipment (time-depth recorders and hook timers) on the gear. During this quarter, five (5) vessels participated in the CRP experimental design project, which required 100% observer coverage. Observer recorded incidental takes of protected species (Table 1) of three (3) marine mammals (3-shortfin pilot whales-alive) and no (0) sea birds, in addition to seven (7) sea turtles (7 leatherback-alive).

Enclosed you will find the original Incidental Take for Marine Mammal and Seabirds submitted by observers during the regular longline coverage as well as the CRP project . These data forms need to be reviewed by the Miami PR division for accuracy with the table provided. After review of the original Incidental Take forms, please return the originals to the POP office

files.

In addition to the POP reporting of Protected Resource (PR) species recorded during observed longline fishing, observers have been requested to inspect the turtle handling and dehooking gear available aboard the vessels as a requirement of the 2004 Biological Opinion (BO). As a requirement of the BO tasking for the Miami Laboratory, I am providing you with copies of the Miami PR Turtle Gear check list form either filled out by the observer or by POP staff during debriefing from quarter 2. A PDF file will be created and will be posted on the SEFSC-POP secured website.. Although it is not clear how this information will be processed, the originals will remain on file in the observer office, room 314. Finally, neither the Turtle Take Estimates (TTE) nor the Net Mortality Ratio (NMR) mentioned in the 2004 BO are provided as our program staffing does not have the expertise to conduct these analyses.
